

Bug Report

Name: Sushanth S Rao

SRN: PES1UG24CS485

BPS54

Bugs:

Bug 1: Bracket generator fails with odd number of teams

When an odd number of teams register, the bracket generator throws an error instead of assigning a bye. Expected: the system should auto-assign a bye to one team so the bracket still generates correctly.

Bug 2: Duplicate team registration allowed after deadline

A team was able to submit a second registration after the stated deadline had passed. Expected: registration should be locked and rejected once the deadline timestamp is reached.

Bug 3: Negative score accepted on match submission

The score-entry form accepted a negative integer for a team's score without a validation error. Expected: the system should reject negative or non-numeric scores.

Bug 4: Winner not auto-advanced to next round after score submit

After submitting a valid match score, the winning team remained in their current bracket slot instead of moving to the next round. Expected: the winner should appear in the correct next-round slot within 5 seconds.

Bug 5: Standings not updated within 200ms under high load

During simulated peak traffic, standings took noticeably longer than 200ms to refresh after a score submission. Expected: standings should recalculate within the 200ms performance target regardless of load.
